We're Part of Your Team

BorderLAN provides your Cyber Defenses with the latest enterprise class systems, reporting, monitoring and backup. We help you stay up and running and reduce breaches, data-loss, and help you with compliance.

BorderLAN Cyber Security offers peace of mind

Our history of 12 years providing solutions to over 1800 organizations and representing over 2 million end-user computers has given us the knowledge to supply the services you need. We use only the best solutions with cyber engineers to defend your network. Trust BorderLAN, your local Cyber Security Professionals.

Transparency - We share everything with you.

Personalization - We focus on your specific network and employees with successful training, defense, and an advanced help desk.

Convenience - We keep you up and running with minimal to no impact to your staff.

Speed - We prepare for attacks, defend them for you, and have back up plans for when disaster strikes.

Why outsource your Cyber Defenses?

45% of small businesses are already infected with some form of malware, as they have insufficient staff, no monitoring, outdated tools, and a lack of training.

per device
per month

Starting at \$100 per device per month, we monitor your network and assist with all your IT needs so you can get back to focusing on what you do best.

✓ BorderLAN

✗ Competition

Firewall	Advanced configuration for best security posture.	Basic configuration to get you on the internet.
Backup	We routinely test backups for continuity and disaster preparedness.	Configure your backups and rely on backup software to do the rest.
Anti-virus	Same enterprise AV we sell to the most security minded customers	Use what's cheapest and integrates best with their platform.
Employee Training	Ongoing employee testing with risk assessment reports to management.	Short training slides with little user retention.
Dark Web Monitoring	Regularly scan the Dark Web to monitor if your user accounts have been compromised.	Most businesses aren't even doing this!
Help Desk	Integrated directly into your desktop with simple one click "I Need Help" support.	Slow reaction times with clunky software.
Email Security	Intuitive spam filtering with easy end user access to find accidentally blocked emails.	Complicated configurations with many legitimate emails stuck somewhere in a cloud quarantine.
Backup Internet	Standard with all offerings and seamless to your business.	Not offered or an expensive add-on.

The BorderLAN Advantage

Darkweb Monitoring

Passwords get compromised and often businesses don't find out until too late. We monitor the Dark Web for your accounts and will alert you when one of your accounts has been compromised and posted to the Darkweb.

Education

Security appliances and software work best in conjunction with educated users. We help you train all employees on safe browsing habits and make it both fun and "sticky".

Email Security

Protect your inbox from phishing attempts and cut down on unwanted spam. It's the proven way to protect users from the majority of threats.

Security Focused

BorderLAN has roots in cyber security before it was a buzzword. With thousands of active customers, we are able to bring intelligence gathered from helping protect the most security conscious customers and apply those same principles to your business.

Cloud Based Backup for ALL Workstations

Servers, desktops, and even remote laptops benefit from cloud based backups. In the event of a hardware or software failure, we help you access the device virtually through the internet in minutes. Ask us for a demonstration, it's incredible!

Backup Internet

All the security in the world doesn't matter if your internet goes down. Rely on BorderLAN for backup internet using the same equipment and technologies that our police, fire, and emergency services rely on.

Be prepared for
500,000
global attacks
a day, by 2021!

Do you know?

- 200 Billion network connected devices by 2025, many with mediocre security.
- 50% of users click on malicious links every week.
- Hacking has become a 4 trillion dollar business.
- Small businesses are a target due to their general lack of security.
- CCPA and new compliance requirements make all businesses a target for fines, lawsuits and class-action, including small businesses.
- Many small businesses have no plan for disaster recovery, few cyber defenses, and do not spend adequate time to evaluate and maintain network defenses.
- 64% of servers are not patched and out of warranty allowing for easy hacking targets on known open vulnerabilities.
- 45% of all small business computers are infected with a password virus, malicious script, or similar.
- 90% of small businesses who are breached go out of business within one year.
